**Cintas Announces Reusable Bouffant Cap and Facemask**

*An earth-friendly alternative to these commonly disposed products*

**Cincinnati, Oh.** – Cintas is now offering reusable Bouffant Caps and Facemasks, earth-friendly alternatives to these commonly disposed of products. Made with antimicrobial material, both products are hypo-allergenic and breathable for a flexible, comfortable fit.

The Facemask features a built-in nose bridge to maximize comfort and is available in two (2) four-tie designs, including a unique “off the mouth” fit, as well as single, double and three-ply options.

The Bouffant Cap, after extensive cleanliness testing, has proven to be four times cleaner than the disposable version.

Both patent-pending products have undergone Antimicrobial Testing (ASTM E2149), are protected by Aegis Microbeshield Technology® and are able to sustain the extensive laundering and sterilization services Cintas provides.

Not only are these products better for the environment – most disposables live for decades in landfills – but they also save money by not requiring constant replenishment.

For more information, visit Booth #350 or [www.cintas.com](http://www.cintas.com).
